WHAT IS AMP?

AMP stands for **Accelerated Mobile Pages**

Google initiative started in 2015 with the intended goal of accelerating mobile pages & loading faster content by eliminating unnecessary codes & scripts, such as Javascript

Websites that support AMP load **4x faster**

Over 31 million domains are now serving over 6 billion AMP pages

AMP is expanding & focusing beyond content:

- Carousels in mobile
- Accept user inputs through AMP forms
AMP FOR EMAIL

Introduced by the AMP Project in 2018, allowing use of a subset of AMPHTML components in email to make them more engaging:

- Embed image galleries
- Filling in a form
- Marking items in a cart
- Add product cards to purchase products within email
- Completing a questionnaire in an email
- Responding to comments
- Linking email to a calendar & tracking event registrations
BENEFITS OF AMP EMAIL

For **Consumers**: email recipients can quickly take actions right through the email without having to visit a separate landing page.

For **Developers**: ability to quickly develop interactive functionality, such as carousels & lightboxes, with minimal effort through the use of code snippets.
**DYNAMIC CONTENT ELEMENTS**

**amp-form** This is AMP’s form element. It allows designers to create forms directly in email that can be completed by email recipients.

**amp-selector** This is a multi-select widget for use within a form.

**amp-list** The `<amp-list>` component fetches dynamic content from a JSON endpoint. The response from the endpoint contains data, which is rendered in the specified template.

**template type=“amp-mustache”** A Mustache template markup to render the results of an amp-list call.

* Mustache is a web template system primarily used for mobile & web applications.
How it works

Email consists of MIME (Multipurpose Internet Mail Extension) parts such as text/plain for plain text email & text/html for an HTML email.

To make email clients recognize AMP for Email, a new MIME type was introduced: text/x-amp-html

Most email sending libraries & services already started support for this new MIME type.
SOME MORE TECHNICAL STUFF

Code Structure

1. Start with a doctype `<!doctype html>`
2. Contains a top level `<html ⚡4email>`
3. Contain `<head>` and `<body>` tags
4. Contain a `<meta charset="utf-8"/>` tag as the first child of your head tag
5. Contain a `<script async src=https://cdnampproject.org/v0.js></script>` tag inside your head tag
6. Contain amp4email boilerplate inside your head tag to initially hide the content until AMP JS is loaded
   `<style amp4email-boilerplate>body{visibility:hidden}</style>`
AMP FOR EMAIL EXAMPLES

Google Drive integration

Respond to comments, assign issues, & resolve issues without opening a doc or sheet
AMP FOR EMAIL EXAMPLES

Doodle integrated booking form

Email recipients can easily select a date & book a time slot.
If a slot was taken, it would no longer be available upon entering the email.
Additionally, Doodle senders could provide new time slots as available ones get booked.
AMP FOR EMAIL EXAMPLES

Pinterest integration

Email recipients can add interesting images to their Pinterest boards within the email using the amp-list component.
Email recipients can filter between domestic & international travel destinations
COMMUNITY SUPPORT

GETTING STARTED WITH AMP

- You must **register** with Google
- **Confirm requirements**, which include:
  - Production-Ready email example
  - Email authenticated through SPF, DKIM, & DMARC
  - Email must follow AMP best practices & Gmail Bulk Sender guidelines
  - Must have low spam complaints & high sender reputation
- **Select the right ESP**
  - Current support from Adobe Campaign Classic, Amazon SES & PinPoint, Aweber, Blueshift, Braze, Cheetah Digital, Clang, Copernica, Customer.io, dotdigital, Elastic Email, eSputnik, ExpressPigeon, Iterable, Klaviyo, MagNews, Mailrelay, Mapp Cloud, Mailion, Mailgun, Mailkit, MessageGears, MindBox, MoonMail, Pepipost, SendPulse, SocketLabs, Sparkpost, Tripolis, & Twilio Sendgrid

- Be mindful of email **client support**
  - Gmail, Yahoo! Mail, Outlook, & mail.ru

- **Any questions? Feel free to pick our brains!**
